Summary

Java backend engineer with 2.5+ years building and owning production microservices for a global banking client: **Spring Boot** REST APIs, event-driven pipelines on Apache Kafka, and SQL performance work, deployed to Kubernetes on AWS. Strong algorithmic foundation: rank 320 of 537,000+ in TCS CodeVita and 1000+ problems solved on LeetCode and Codeforces.

Experience

Software Development Engineer @ Accenture Solutions Pvt Ltd, Hyderabad, India · On-site

Jan 2025 – Present

Java · Spring Boot · REST APIs · Apache Kafka · Kubernetes · Docker · SQL · AWS · Microservices

- **Made** banking APIs **28%** faster, cutting average response time from **0.42s** to **0.30s** on Spring Boot services handling **30K+** requests/day, by tracing the slowest database calls, tuning queries, adding indexes, and caching frequently used data.
- **Removed** the chain reaction where one busy service slowed every service waiting on it, by moving **4** workflows onto Apache Kafka so services hand off work instead of waiting for a reply, raising processing capacity **35%** across **3** consumers.
- **Raised** releases to **6** per week and cut failed deployments **20%**, by packaging **5** services with Docker and automating deployment on Kubernetes so new versions go live with no downtime for users.
- **Added 120+** automated tests (JUnit, Mockito) across order, payment, and data-sync workflows, set to run before every code merge so defects are caught during development instead of reaching customers.
- **Cut** the time spent finding the cause of production issues by standardizing failure handling across all services: one common error format, automatic retries when a dependent service is down, and consistent logs.
- **Mentored** an intern to independent delivery, accelerating onboarding with hands-on support, code reviews, and best-practice guidance.

Associate Software Developer @ Tech Mahindra Limited, Hyderabad, India · On-site

May 2024 – Dec 2024

Java · Spring Boot · REST APIs · RabbitMQ · MySQL · React · Docker · Git · CI/CD

- **Delivered** a vendor-management platform for **150** employees and **70** vendors covering **20+** business workflows, replacing scattered manual tracking. Owned it end to end: API design, database design, multi-role login, and deployment.
- **Cut** user waiting time **35%** by moving **5K** background jobs/day (report generation, email notifications) onto RabbitMQ, so slow work finishes in the background instead of holding up the screen.
- **Sped up** the slowest reports **30%** on MySQL tables of **300K+** rows, by indexing the columns those reports scanned repeatedly and caching repeated results.
- **Improved** project page load time **40%** by restructuring the front-end code and removing clutter, using React and Redux.
- **Moved** releases from **1** to **4** per week by automating a deployment process that previously took around an hour of manual steps.

Projects

EduMagnetX — Event-Driven E-Learning Platform

Jan 2025

Java · Spring Boot · Spring Security · Apache Kafka · PostgreSQL · AWS (EC2, S3, CloudFront) · Nginx · Docker · GitHub Actions

- **Designed** and shipped a multi-tenant learning platform solo, with secure role-based login, course management, and REST APIs for **200+** concurrent users.
- **Built** the notification path on Apache Kafka so enrollment and course-update alerts still reach every learner during sudden traffic spikes, with no message loss.
- **Automated** releases to under **8 minutes** with GitHub Actions and Docker on AWS EC2 behind Nginx, serving images and course files through S3 and CloudFront for faster page loads.

Technical Skills

Languages: Java, C++, SQL, JavaScript, TypeScript

Spring Ecosystem: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Spring Validation, Spring AOP

Backend & APIs: REST APIs, Microservices, JWT Authentication, OAuth2, OpenAPI/Swagger, Hibernate/JPA

Messaging & Distributed Systems: Apache Kafka, RabbitMQ, caching, asynchronous processing, event-driven architecture

Databases: MySQL, PostgreSQL, MongoDB, query optimization, indexing, transactions

Cloud & DevOps: AWS (EC2, S3, CloudFront), Docker, Kubernetes, Nginx, Git, GitHub Actions, CI/CD

Testing & Build: JUnit, Mockito, Maven | **Frontend:** React, Redux, HTML/CSS

Practices & Tools: Agile/Scrum, code review, debugging, monitoring & logging, JIRA, Confluence

Education

Lovely Professional University, Punjab, India

Master of Computer Applications (MCA)

CGPA: 8.2

2022 – 2024

Chaitanya (Deemed to be University), Telangana, India

B.Sc. Computer Science

CGPA: 8.4

2019 – 2022
